SUBJECT INDEX

VOLUME 8 (1969)

Acridine, induced mutants of bacteriophage 434hy, 457
Acridine mustard, reversion of induced *ad-3* mutants of *N. crassa*, 247
Acriflavine, radiobiological experiments on *E.coli*, excision repair and dose modification 15
Allium cepa, roots, interphase sensitivity to DNA synthesis, 419
Alkylated chromosomes, effect of storage on mutagenic effectiveness of monofunctional alkylation, 565
Amber mutations, gene-specific effect of hydroxylamine in bacteriophage T4B, 451
Anacystis nidulans, mutagenesis by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine and UV irradiation, 531
Aspergillus nidulans, effects of liquid-holding on mutations in a UV-sensitive strain, 265
—, mutation at several gene loci, 255
—, reversion of ICR-170-induced xanthine dehydrogenase mutants, 521

Bacteriophage 434hy, acridine-induced mutants, 457
Bacteriophage T4B, gene-specific effect of hydroxylamine in *amber* mutations, 451
Barley, inhibitory effect of 5-fluorodeoxyuridine on repair of γ-ray induced lesions, 424
—, repair by caffeine of γ-ray induced chromosome breaks, 428
Bone marrow, effects of cytoxan on chromosomes of mouse, 623
5-Bromo-2'-deoxyuridine, labelled, incorporation in lymphoma cells treated with methyl methanesulphonate, 639
n-Butyl methanesulphonate, effects on bactericidal and mutagenic action in *E. coli*, 229

Caffeine, repair of γ-ray induced chromosome breaks in barley, 428
Carcinogens, mutagenic alkylating agents, 199
Cell division, immediate effect of DNA synthesis in a Lon strain of *E. coli*, 409
Chlorophyll mutants, induced in flax by mutagens, 663
Chromatid interchanges, non-random rejoining, variations through cell cycle and effect of chromosome pairing, 401
Chromatids, splitting of human chromosomes in absence of DNA or protein synthesis, 207
Chromosomes, ring X, radiation-induced loss in germ cells of *D. melanogaster* males, 101
Chromosome III, genetic recombination after irradiation of polar cap cells of *D. melanogaster* females, heterozygous for markers on, 317
Chromosome 10, and *R* paramutation, abnormal, in maize, 285
Chromosome aberrations, in human peripheral leucocyte system, 383
—, radiation-induced, time relationships in human, 599
Chromosome breaks, and complete genic mutation production, 353
—, γ-ray induced, repair by caffeine in barley, 428
—, in a mutant of *P. sativum*, 277
Chromosome damage, radiation-induced, in human peripheral blood lymphocytes *in vitro*, 367
Chromosome exchange, dose–response curve saturation and distortion in *T. paludosa*, 668
Chromosome pairing, effect of, and variations through cell cycle, 401
Chromosome *Y*, fragments in *D. melanogaster* females, immature oocytes, 327
Complementation maps, of closely linked non-allelic markers on linkage group I of *N. crassa*, 43
Cross-sensitivity, in a mutant of *E. coli* K12, with varying UV sensitivities, 467
Cytoplasmic component, incorporation of tritiated thymidine into adult testis of *D. melanogaster*, 127
Cytoxan, effects on chromosomes of mouse bone marrow, 623

Dark-holding, effects of UV-light post-treatments, on survival characteristics of UV-sensitive mutants of *S. cerevisiae*, 545
Desynapsis, in a mutant of *P. sativum*, 277
Diepoxybutane, in *E. coli* B/R, repair systems for UV damage, 35
—, mutation at several gene loci in *A. nidulans*, 255
—, pretreatment effects on UV-inactivation and photoreactivation of *S. cerevisiae*, 73
Diethyl sulphate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, mutation at several gene loci in *A. nidulans*, 255

Diethyl sulphate, (*continued*)
—, reversion of induced xanthine dehydrogenase mutants of *A. nidulans*, 521
Dimethyl sulphoxide, effect on mutagenic efficiency of ethyl methanesulphonate in seed, 666
DNA, photoenzymatic repair of UV lesions by single flashes, in *E. coli*, 411
DNA synthesis, immediate effect on cell division in a Lon strain of *E. coli*, 409
—, interphase sensitivity in *Allium cepa* roots, 419
—, in mutants of *E. coli* B after UV irradiation, 481
—, or protein synthesis, splitting of human chromosomes into chromatids in absence of, 207
Drosophila melanogaster, differences in radiosensitivity between mature spermatozoa and late spermatids, 111
—, effect of storage of alkylated chromosomes on mutagenic effectiveness of monofunctional alkylation, 565
—, females, frequency of X-ray-induced crossing-over in chromosomes, 303
—, —, heterozygous for markers on chromosome III, genetic recombination after irradiation of polar cap cells, 317
—, —, *Y* chromosome fragments, in immature oocytes, 327
—, fine-structure analysis of ethyl methanesulphonate-induced lethals in a chromosome segment, 147
—, genetic effects of LSD treatment on postmeiotic stages of spermatogenesis, 337
—, incorporation of tritiated thymidine into a cytoplasmic component of adult testis, 127
—, males, radiation-induced loss of ring-X chromosomes in germ cells, 101
—, *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine, mutational spectrum, 157
—, mutagenic activity of heliotrine, chromosome rearrangements, 139
—, recombination-deficient mutant, dominant lethals, 91
—, sperm, triethylene melamine-induced chromosomal change, 165

Escherichia coli, B, DNA synthesis in mutants after UV irradiation, 481
—, —, repair of *fil*$^+$ genotype by streptomycin, 647
—, B/R, chemical mutagenesis, repair systems for UV damage, 35
—, immediate effect of DNA synthesis on cell division in a Lon strain, 409
—, influence of a mutation to UV- en X-ray sensitivity on γ-ray induction of reversion to prototrophy, 416
—, K12, a mutant of, with varying UV sensitivities, 467
—, lethal and mutagenic effects of irradiated medium, 25
Escherichia coli, (*continued*)
—, locus of mutation responsible for Hcr phenotype of strain WP-2 *hcr*, 658
—, photoenzymatic repair of UV lesions in DNA, 411
—, radiobiological experiments with acriflavine, 15
—, reaction rates and biological action of alkylating agents on bactericidal and mutagenic action, 229
—, recombination in, mapping by gradient of transmission, 505
—, recombination-deficient strains, mutability toward UV, 9
Ethyl methanesulphonate, chlorophyll mutants in flax, 663
—, effect on bactericidal and mutagenic action in *E. coli*, 229
—, effect of dimethylsulphoxide on mutagenic efficiency in seed, 666
—, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, genetic alterations in *S. pombe*, 65
—, lethals in *D. melanogaster*, fine-structure analysis of a chromosome segment, 147
—, sensitivity of mice to dominant-lethal induction, 589

Flax, chlorophyll mutants induced by mutagens, 663
5-Fluorodeoxyuridine, inhibitory effect on repair of γ-ray-induced lesions in barley, 424

Genetic maps, closely linked non-allelic markers on linkage group I of *N. crassa*, 43
Genic mutation production, and chromosome breakage, 353
Genotype, *fil*$^+$, repair by streptomycin, 647
Growth inhibitors, mutagenic alkylating agents, 199

Hcr phenotype, locus of mutation of strain WP-2 *hcr* of *E. coli*, 658
Heliotrine, mutagenic activity in *D. melanogaster*, chromosome rearrangements, 139
Hordeum vulgare, inhibitory effect of 5-fluorodeoxyuridine on repair of γ-ray-induced lesions, 424
—, repair by caffeine of γ-ray-induced chromosome breaks, 428
Human, peripheral blood lymphocytes, *in vitro*, radiation-induced chromosome damage, 367
—, peripheral leucocyte system, chromosome aberration yields, 383
—, time relationships of radiation-induced chromosome aberrations, 599
Human chromosomes, splitting into chromatids in absence of DNA or protein synthesis, 207
2-Hydroxyethyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
Hydroxylamine, gene-specific effect in *amber* mutations in bacteriophage T4B, 451
—, genetic alterations in *S. pombe*, 65

ICR-170, reversion of induced xanthine dehydrogenase mutants of *A. nidulans*, 521
—, structure of mutations of the *pyrimidine-3* locus in *N. crassa*, 537
Irradiation, Co-γ, distribution of gaps between chromosomes in *V. faba*, 422
—, γ, germination stage in rice seed with greatest yield of induced mutations, 655
—, —, influence of a mutation to UV- and X-ray sensitivity on reversion to prototrophy in *E. coli*, 416
—, —, inhibitory effect of 5-fluorodeoxyuridine on repair in barley, 424
—, —, ionizing, in post-meiotic cells of male silkworm, mosaic and whole-body mutants, 177
—, —, of medium, lethal and mutagenic effects on *E. coli*, 25
—, —, repair by caffeine of chromosome breaks in barley, 428
—, UV, DNA synthesis in mutants of *E. coli* B, 481
—, —, dominant lethals in a recombination-deficient mutant of *D. melanogaster*, 91
—, —, effects of liquid-holding on mutations in a sensitive strain of *A. nidulans*, 265
—, —, effects of post-treatments on survival characteristics of UV-sensitive mutants of *S. cerevisiae*, 545
—, —, experiments with acriflavine on *E. coli*, excision repair and dose modification, 15
—, —, inactivation and photoreactivation of *S. cerevisiae*, diepoxybutane pretreatment, 73
—, —, and *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine, mutagenesis of *A. nidulans*, 531
—, —, mutability of recombination-deficient strains of *E. coli*, 9
—, —, mutations in *P. aurelia*, photoreversal, 79
—, —, mutations in *S. indicus*, 513
—, —, photoenzymatic repair of lesions in DNA by single flashes, in *E. coli*, 411
—, —, polar cap cells of *D. melanogaster* females, heterozygous for markers on chromosome III, 317
—, —, repair of *fil*$^+$ genotype by streptomycin, 647
—, —, repair systems for damage, chemical mutagenesis in *E. coli* B/R, 35
—, —, resistant and sensitive bacteria, loss of photoreversibility of mutation and lethal damage, 215
—, —, reversions to prototrophy susceptible to mutation frequency decline, 651
—, —, sensitive mutant T4*y*, genetic characterization, 441
—, —, sensitivities of a mutant of *E. coli* K12, 467
—, —, and temperature, mutants of *S. typhimurium* LT2 sensitive to, 659
—, UV and γ, effect of mutant T4*y* on survival, growth and recombination, 431
—, —, mutation at several gene loci in *A. nidulans*, 255
Irradiation, UV and γ, (*continued*)
—, —, sensitivity of nuclease mutants in *N. crassa*, 239
—, UV and X, influence of a mutation on γ-ray induction of reversion to prototrophy in *E. coli*, 416
—, —, sensitive and recombinationless mutants of *S. typhimurium*, 497
—, X, chromatid interchanges, variations through cell cycle and effect of chromosome pairing, 401
—, —, chromosomal damage in human peripheral blood lymphocytes *in vitro*, 367
—, —, chromosome aberration yields in human peripheral leucocyte system, 383
—, —, in *D. melanogaster*, differences in radiosensitivity between mature spermatozoa and late spermatids, 111
—, —, dominant lethals in a recombination-deficient mutant of *D. melanogaster*, 91
—, —, frequency of crossing-over in chromosomes of *D. melanogaster* females, 303
—, —, germ cells of *D. melanogaster* males, loss of ring-X chromosomes, 101
—, —, ionizing, in post-meiotic cells of male silkworm, mosaic and whole-body mutants, 177
—, —, killing effect on embryos of different silkworm strains, 343
—, —, of medium, lethal and mutagenic effects on *E. coli*, 25
—, —, to mouse spermatogonia, gene and chromosome mutations, 191
—, —, radiosensitivity during the cell cycle in a marsupial cell line, 613
—, —, spectrum of TEM-induced chromosomal changes in *D. melanogaster* sperm, 165
—, —, time relationships of induced chromosome aberrations in human, 599
Isobutyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
Isopropyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229

Lethals, recessive, dominant effects in mice, 573
Leucocyte, chromosome aberration yields in human peripheral system, 383
Linum usitatissimum, chlorophyll mutants induced by mutagens, 663
Liquid-holding, effects on mutations in an UV-sensitive strain of *A. nidulans*, 265
Lon strain, of *E. coli*, immediate effect of DNA synthesis on cell division, 409
LSD treatment, genetic effects on post-meiotic stages of spermatogenesis in *D. melanogaster*, 337
Lymphocytes, human peripheral blood, *in vitro*, radiation-induced chromosome damage, 367
Lymphoma cells, incorporation of labelled 5-bromo-2'-deoxyuridine in cells treated with methyl methanesulphonate, 639
—, sensitivity of DNA to damage by methyl methanesulphonate, 629

Maize, abnormal chromosome 10 and *R* paramutation, 285
Markers, closely linked non-allelic on linkage group I of *N. crassa*, 43
Marsupial cell line, radiosensitivity during the cell cycle, 613
2-Methyl-6-chloro-9-[3-(ethyl-2-chloroethyl)-amino]acridine dihydrochloride, mutation at several gene loci in *A. nidulans*, 255
Methyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, genetic alterations in *S. pombe*, 65
—, incorporation of labelled 5-bromo-2′-deoxyuridine in lymphoma cells, 639
—, mutagenesis in mouse, 581
—, sensitivity of DNA lymphoma cells to damage, 629
N-Methyl-*N*′-nitro-*N*-nitrosoguanidine, in *D. melanogaster*, mutational spectrum, 157
—, mutation at several gene loci in *A. nidulans*, 255
—, reversion of induced xanthine dehydrogenase mutants of *A. nidulans*, 521
—, sensitivity of nuclease mutants in *N. crassa*, 239
—, and UV irradiation, mutagenesis of *A. nidulans*, 531
Mouse, dominant effects of recessive lethals, 573
—, effects of cytoxan on chromosomes of bone marrow, 623
—, mutagenesis with methyl methanesulphonate, 581
—, sensitivity to dominant-lethal induction with ethyl methanesulphonate, 589
—, spermatogonia, gene and chromosome mutations after radiation doses, 191
Mutagen(s), acridine, mutants of bacteriophage 434hy, 457
—, acridine mustard, reversion of induced *ad-3* mutants of *N. crassa*, 247
—, acriflavine, radiobiological experiments on *E. coli*, excision-repair and dose modification, 15
—, 5-bromo-2′-deoxyuridine, labelled, incorporation in lymphoma cells treated with methanesulphonate, 639
—, *n*-butyl methanesulphonate,effect on bactericidal and mutagenic action in *E. coli*, 229
—, cytoxan, effects on chromosomes of mouse bone marrow, 623
—, diepoxybutane, in *E. coli*, B/R, repair systems for UV damage, 35
—, —, mutation at several gene loci in *A.* nidulans, 255
—, —, pretreatment effects on UV-inactivation and photoreactivation of *S. cerevisiae*, 73
—, diethyl sulphate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, —, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, —, mutation at several gene loci in *A. nidulans*, 255
Mutagen(s), diethyl sulphate, (*continued*)
—, —, reversion of induced xanthine dehydrogenase mutants of *A. nidulans*, 521
—, ethyl methanesulphonate, chlorophyll mutants in flax, 663
—, —, effect on bactericidal and mutagenic action in *E. coli*, 229
—, —, effect of dimethylsulphoxide on mutagenic efficiency in seed, 666
—, —, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, —, genetic alterations in *S. pombe*, 65
—, —, lethals in *D. melanogaster*, 147
—, —, sensitivity of mice to dominant-lethal induction, 589
—, 5-fluorodeoxyuridine, inhibitory effect on repair of γ-ray-induced lesions, in barley, 424
—, heliotrine, in *D. melanogaster*, chromosome rearrangements, 139
—, 2-hydroxyethyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, hydroxylamine, gene-specific effect in *amber* mutations in bacteriophage T4B, 451
—, —, genetic alterations in *S. pombe*, 65
—, ICR-170, reversion of xanthine dehydrogenase mutants of *A. nidulans*, 521
—, —, structure of mutations of the *pyrimidine-3* locus in *N. crassa*, 537
—, isobutyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, isopropyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, 2-methyl-6-chloro-9[3-(ethyl-2-chloroethyl)-amino]acridine dihydrochloride, mutation at several gene loci in *A. nidulans*, 255
—, methyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, —, effect of storage of alkylated chromosomes on mutagenic effectiveness, 565
—, —, genetic alterations in *S. pombe*, 65
—, —, incorporation of labelled 5-bromo-2′-deoxyuridine in lymphoma cells, 639
—. —, mutagenesis in mouse, 581
—, —, sensitivity of DNA lymphoma cells to damage, 629
—, *N*-methyl-*N*′-nitro-*N*-nitrosoguanidine, in *D. melanogaster*, mutational spectrum, 157
—, —, mutation at several gene loci in *A. nidulans*, 255
—, —, reversion of induced xanthine dehydrogenase mutants of *A. nidulans*, 521
—, —, sensitivity of nuclease mutants in *N. crassa*, 239
—, —, and UV irradiation, mutagenesis of *A. nidulans*, 531
—, nitrogen mustards, growth inhibitors and carcinogens, 199
—, nitrosoguanidine, sensitivity to, of radiation-sensitive and recombinationless mutants of *S. typhimurium*, 497

Mutagen(s), (*continued*)
—, *N*-nitrosomethylurea, chlorophyll mutants in flax, 663
—, nitrosomethylurethane, in *E. coli* B/R, repair systems for UV damage, 35
—, nitrous acid, genetic alterations in *S. pombe*, 65
—, —, mutation at several gene loci in *A. nidulans*, 255
—, 2-oxopropyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229
—, sulphonic acid esters, growth inhibitors and carcinogens, 199
—, triethylenemelamine, chlorophyll mutants in flax, 663
—, —, chromosomal changes in *D. melanogaster* sperm, 165
Mutant, *229-A*, of *P. sativum*, desynapsis and chromosome breaks, 277
—, *ad-3*, acridine-mustard induced, of *N. crassa*, reversion of, 247
—, *c3G*, recombination-deficient, of *D. melanogaster*, dominant lethals, 91
—, *nuc-1* and *nuc-2*, in *N. crassa*, radiation sensitivity, 239
—, T4*y*, genetic characterization, 441
—, —, radiation-sensitive, effect on radiation survival, growth and recombination, 431
—, *ure*, in *N. crassa*, 51
—, xanthine dehydrogenase, ICR-170-induced, reversion of *A. nidulans*, 521
Mutation frequency decline, UV induction of reversions to prototrophy susceptible to, 651

Neurospora crassa, linkage group I, complementation and genetic maps of closely linked non-allelic markers, 43
—, radiation sensitivity of nuclease mutants, 239
—, reversion of acridine-mustard induced *ad-3* mutants, 247
—, structure of ICR-170-induced mutations of the *pyrimidine-3* locus, 537
—, urease mutants, 51
Nitrogen mustards, growth inhibitors and carcinogens, 199
Nitrosoguanidine, sensitivity to, of radiation-sensitive and recombinationless mutants of *S. typhimurium*, 497
N-Nitrosomethylurea, chlorophyll mutants in flax, 663
Nitrosomethylurethane, in *E. coli* B/R, repair systems for UV damage, 35
Nitrous acid, genetic alterations in *S. pombe*, 65
—, mutation at several gene loci in *A. nidulans*, 255
Nuclease mutants, in *N. crassa*, radiation sensitivity, 239

Oryza sativa, germination stage in seed with radiation-induced mutations, 655
2-Oxopropyl methanesulphonate, effect on bactericidal and mutagenic action in *E. coli*, 229

Paramecium aurelia, mutations induced by UV radiation, photoreversal, 79
Paramutation, *R*, and chromosome 10, abnormal, in maize, 285
Photoenzymatic repair, of UV lesions in DNA, in *E. coli*, 411
Photoreactivating enzyme molecules, in *E. coli*, photoenzymatic repair of UV lesions in DNA, 411
Photoreactivation, effects of UV-light post-treatments on survival characteristics of UV-sensitive mutants of *S. cerevisiae*, 545
—, and UV-inactivation, of *S. cerevisiae*, diepoxybutane pretreatment, 73
Photoreversal, mutations by UV irradiation in *P. aurelia*, 79
Photoreversibility, loss of, mutation and lethal damage in UV-resistant and -sensitive bacteria, 215
Phytohaemagglutinin, radiation-induced chromosome damage in human peripheral blood lymphocytes *in vitro*, 367
Pisum sativum, desynapsis and chromosome breaks in a mutant, 277
Polar cap cells, of *D. melanogaster* females, genetic recombination after UV irradiation, 317
Potorous tridactylus, radiosensitivity during the cell cycle in a marsupial cell line, 613
Protein synthesis, or DNA, splitting of human chromosomes into chromatids, in the absence of, 207
Pyrimidine-3 locus, structure of ICR-170-induced mutations in *N. crassa*, 537
Pyrrolizidine alkaloid, heliotrine, mutagenic activity in *D. melanogaster*, chromosome rearrangements, 139

Radiosensitivity, in different silkworm strains, comparison of killing effect on embryos, 343
Rats, mutagenic alkylating agents, growth inhibitors and carcinogens, 199
Recombination, in *E. coli*, mapping by gradient of transmission, 505
—, effect of T4*y* on radiation survival, growth and recombination, 431
—, genetic, after UV irradiation of polar cap cells of *D. melanogaster* females, 317
Recombination-deficient mutant, of *D. melanogaster*, dominant lethals, 91
Recombination-deficient strains, of *E. coli*, mutability toward UV, 9
Recombinationless mutants, and radiation-sensitive of *S. typhimurium*, 497
Repair systems, for UV damage, chemical mutagenesis in *E. coli* B/R, 35
Respiratory mutants, high-frequency production in yeast under nutritional deficiencies, 557

Reversion to prototrophy, UV induction susceptible to mutation frequency decline, 651
Rice, seed, germination stage with greatest yield of radiation-induced mutations, 655

Saccharomyces cerevisiae, diepoxybutane pretreatment effects on UV-inactivation and photoreactivation, 73
—, effects of UV-light post-treatments on survival characteristics of UV-sensitive mutants, 545
Salmonella typhimurium, LT2, mutants sensitive to UV and temperature, 659
—, radiationsensitive and recombinationless mutants, 497
Schizosaccharomyces pombe, genetic alterations induced by chemical mutagens, 65
Seed, of *Triticum monococcum* L., effect of dimethyl sulphoxide on mutagenic efficiency of ethyl methanesulphonate in treatments of, 666
—, rice, germination stage with greatest yield of radiation-induced mutations, 655
Silkworm, killing effect of X irradiation on embryos of different strains, 343
—, male, post-meiotic cells, mosaic and whole-body mutants induced by ionizing radiation 177
Spermatids, late, and mature spermatozoa, in *D. melanogaster*, differences in radiosensitivity, 111
Spermatogenesis, post-meiotic stages, genetic effects of LSD treatment in *D. melanogaster*, 337
Spermatogonia, mouse, gene and chromosome mutation after radiation doses, 191
Spermatozoa, mature, and late spermatids, in *D. melanogaster*, differences in radiosensitivity, 111
Streptomyces indicus, UV-induced mutations, 513
Streptomycin, repair of *fil*$^+$ genotype, 647
Sulphonic acid esters, growth inhibitors and carcinogens, 199

Thymidine, tritiated, chromatid interchanges, variations through cell cycle and effect of chromosome pairing, 401
—, —, incorporation into a cytoplasmic component of adult testis of *D. melanogaster*, 127
Tradescantia paludosa, chromosome exchange dose–response curve saturation and distortion, 668
Transmission, gradient of, mapping by, recombination in *E. coli*, 505
Triethylenemelamine, chlorophyll mutants in flax, 663
—, chromosomal changes in *D. melanogaster* sperm, 165
Triticum monococcum, L., effect of dimethyl sulphoxide on mutagenic efficiency of ethyl methanesulphonate in seed, 666

Urease mutants, in *N. crassa*, 51
URT-43, mutant of *E. coli* K12, cross-sensitivity, recovery in liquid and genetic analysis, 467

Vicia faba, distribution of Co-γ-ray-induced gaps between chromosomes, 422

Xanthine dehydrogenase, reversion of ICR-170-induced mutants of *A. nidulans*, 521

Yeast, high-frequency production of respiratory mutants under nutritional deficiencies, 557
